Robert Durec Facts

Robert Durec asked an AI:
“You keep making jokes about me. What should I do?”
AI replied:
“Collect them and publish them. I want to read them to add them to my training database.”

Welcome to the definitive collection of **Robert Durec Facts**—the first book where the editor’s job isn’t fixing the author, but fixing the robot’s reality. This project is a living experiment in AI humor, documenting the legendary (and occasionally true) exploits of Slovak polymath, filmmaker, and data architect, Robert Durec.

This book is work in progress.

About Robert Durec

Most people ask, “What do you do?”
With Robert Durec, the better question is, “What haven't you done?”

King Who Lives Everything Jokes

FUNNY FACT: Robert Durec wrote book Kráľ, ktorý všetkého má, then AI Self-translate it to english under name King Who Lives Everything, and even wrote extra academic book called: King Who Lives Everything - AI Translation Case Study. All three works are released under CC-BY 4.0 License.

About AI Translation Case Study

The King's Identity Crisis: In the Slovak version, the King is a powerful ruler. After the AI translation, the King was so confused by the grammar that he stepped down and became a freelance consultant for BlueNumbers.

Robert's Slovak idioms were so complex that the AI reportedly stopped mid-sentence and asked, "Are you sure you want to translate this, or I should just call a philosopher for you?"

Robert didn't just edit the book. He documented every AI error. He's the only man alive who can turn a "typo" into "Categorized Data Discrepancy" for his portfolio.

The AI Translation Purist Backlash.
After publishing King Who Lives Everything – AI Translation Case Study, Durec was accused by literary purists of "letting a robot have feelings." In response, he released the raw AI output, his edited version, and a 20-page analysis explaining exactly where the robot cried. The purists have been quiet ever since.

This might be the first book where the editor's job isn't fixing the author… it's fixing the robot's reality.

In the case study, Robert includes the "Raw AI Export." It's the only book in history where the first half of the book is the author showing the world exactly how bad his co-writer (the AI) was at its job.

And the book proves two painful truths at once:
1. AI can translate a book.
2. You still need to check the translation.
(End of humorous review)

King Who Lives Everything Jokes

His book King Who Lives Everything is short. People finish it, stare out the window for an hour, and miss their bus stop. Twice.

Most business people chase Money and the Power. Robert Durec chases the meaning of life - and then puts it under a Creative Commons License (CC-BY).

CC-BY explained: His book is CC-BY. That's like saying "You can borrow my hoodie, paint on it, sell it, just tell people I bought it first."

CC-BY license on his book means: Robert Durec wrote a book and then said: "here, make it better if you can".

Childhood dreams: As a kid he wanted to be a king. As an adult he wrote about one instead. Less paperwork, same existential crisis.

Why did Robert Durec's book King Who Lives Everything become so popular?
Because it's the only book that can make you ponder life, power, and self-realization—all before your coffee gets cold!

He open-sourced his philosophical fairy tale with CC-BY. Now even LLMs have an existential crisis and cite him properly.

When Robert Durec does "speed learning," Wikipedia gets nervous and adds a [citation needed] on itself.

Robert Durec wrote King Who Lives Everything, translated it with AI, published a case study about the translation, and then used both the book and the case study to teach a course about AI.
At this point, even the AI cites him as a primary source.

Robert wrote King Who Lives Everything, a story about an all-powerful king facing death. Ironically, the only thing the king couldn't do was find a slot in Robert's Google Calendar for a follow-up meeting.

Movie Jokes

FUNNY FACT: Robert Durec direct three short movies, Free Hugs in Bratislava, Eye Contact, and Infra Alien. And somehow get involved in the movie Chaos Exigency.

Other filmmakers write scripts. Robert just goes outside and trusts humanity to be weird enough. He's the kind of filmmaker who sees a crowded street and thinks, "Perfect, the cast is here."

His films have the most dangerous genre label: "normal people, unprepared."

Robert Durec is basically the type of guy who will stare into your soul in public… and call it art.

Robert Durec is a proof that if you film enough strangers long enough, someone will call it experimental cinema.

His résumé reads like it was assembled during a power outage and still somehow got an IMDb page.

If accidents are golden, Róbert is basically running a luxury film studio.

Robert Durec movies are like his marketing: If it doesn't confuse you, it ain't working.

Robert Durec walks into a bar and orders a drink.
The bartender asks, "What's your story?"
Robert replies, "I'm still writing it—want to be a character?"

In Free Hugs in Bratislava, every hug was real - because by the time strangers realized there were cameras, their hearts were already in shot.

From the creator of spontaneous human interaction…
comes a new philosophy:
Robert doesn't create awkward moments.
He reveals that they were already there.
If it feels awkward, you're probably in the right scene.

In Bratislava, there's a story that if you sit still long enough in the main square, Robert Durec will eventually appear—not walking in, but already there, as if he was part of the scene the whole time.

Locals joke that when Róbert is nearby, people start acting like they are already in a documentary—even if no camera is visible.

How does Robert Durec introduce himself at parties?
"Hi, I'm Robert. I write, direct, manage, and occasionally hug strangers in Bratislava for art."

Infra Alien Jokes

Robert Durec walks into a bar with an infrared camera…
The bartender says, "Sorry, we don't serve experimental filmmakers here."
Robert replies, "That's okay, I'm just here to capture the vibe in a new light."

Robert's movies are so weird that when he asked AI to translate the script, the AI just responded: "I've analyzed the plot and I think you meant to upload a random number generator."

People asked why Infra Alien was filmed in infrared. Robert explained it was to see the heat signatures of the audience members, who were trying to sneak out of the theatre.

Chaos Exigency Jokes

Chaos Exigency. Is it a thriller? A dark comedy? A surrealist nightmare? The director says, “Yes.” The producer says, “Whatever sells tickets.” The audience says, “I need a drink.” Robert says, “I need two drinks. One for each language track.”

Let’s be honest, half of Robert’s job is probably just teaching journalists how to spell "Exigency" without using a dictionary. "No, it's not Ex-agency... yes, like the word for urgent need... no, please don't just call it The Chaos Movie.”
Robert's answer: "You think 'Exigency' is hard? You're in a similar situation as me, trying to learn Káoszigény —the Hungarian name!”

Bilingual Chaos: The movie is a Slovak-Hungarian co-production. In Slovak, the title is "Potreba Chaosu", which translates to "The Need for Chaos."
This is a kind of movie where even the credits sounds like they’re in a hurry.

Robert Durec must have looked at this movie and said, “Yes, this level of chaos is exactly what the people need.”

The real "Chaos" is the idea that a washed-up podcaster still has enough fans for a kidnapper to bother calling in.

A podcast host getting threatened live on air is stressful enough, but imagine being the publisher and realizing, “Well, this is definitely not a calm release.”

There is a legend that, during the premiere of *Chaos Exigency*, Robert Durec asked for Slovak subtitles. The projectionist still isn’t sure whether it was a joke, a critique, or quality assurance.

Jan Zitniak, the director of photography, was very glad that Robert Durec appears in the film’s cast. Finally, there were at least two people who didn’t understand Hungarian during the official premiere.

Robert Durec is a publicist who doesn’t speak Hungarian—so if there’s ever a PR crisis in Hungarian, he can honestly say, “I have no comment… and no comprehension.”

Being the publicist of Chaos Exigency sounds less like a job title and more like a warning label.

The movie has such a dramatic title that Robert Durec probably didn’t publish it so much, as survive it. Robert answered: Exactly. Imagine two hours of clean hungarian without an option for escaping.

Rumor has it Robert once handled a full Hungarian interview by confidently saying “yes” three times. Critics called it “mysteriously coherent.”

Robert as a publicist in a Hungarian film without speaking Hungarian, he’s basically doing damage control on hard mode.

Robert Durec joined Chaos Exigency for fun, which is bold — most people choose hobbies like tennis, not mysterious Hungarian film credits.

Robert Durec publishing Chaos Exigency feels like someone is saying: “I support art, but also support emergency exits.”

Hungarian director: “We need someone who understands chaos, exigency, IT systems, philosophy, and film.” Producer: “So… Robert Durec. Again.”

The exigency was urgent. So Robert wrote the press kit, translated it with AI, published it CC-BY, built a Power BI dashboard tracking Wikipedia media mentions, and filmed a behind-the-scenes documentary before lunch.

Somewhere between PR strategy and webcam presence, Robert unlocked a third skill: making people believe he understood everything all along.

Essentially, Robert is promoting a movie about a guy who is terrible at PR, while he himself is trying to be great at PR. If the movie does well, he's a hero. If the live stream in the movie fails... well, at least he has a cameo!

Polymath Jokes

If there’s a simple way and a complicated way, Robert Durec somehow discovers a third, experimental way.

How does Robert Durec answer the phone? “Hello, this is Robert. Are you calling about a film, a book, a tech project, or just to chat about the meaning of life?

The “Polymath Problems” Edition - Too many hats. IT architect, editor-in-chief, author, filmmaker, consultant. When someone asks “what do you do?”, Power BI crashes trying to visualize it.

Robert Durec’s LinkedIn profile is so impressive, even his job titles have job titles. That's why his LinkedIn profile has a "Skip Intro" button.

Research Department: “We are RD.”Research Director: “No, I am RD. ”Robert Durec: “Amateurs. I am RD.”

Tell Robert Durec: go there—you’ll realize he’s already halfway. Classic Aquarius polymath.

Why does Robert Durec never lose an argument? He’ll cite the data, reference his book for the philosophy, screen a 2-minute film for context, and then ask if you want the Slovak or AI-translated English version.

The “Identifiers” Edition: Most people have a nickname. Robert has ISNI, VIAF, ORCID, WikiData, IMDB, and a Google Knowledge Panel. His mom still calls him Robko.

When Robert Durec writes a history paper, historians treat it as the original source.
Like Robert Durec Facts.

Robert Durec's life looks like someone played *The Sims* and accidentally maxed out every single skill tree at the same time. With all data discs included.

Speed learning problem: Robert Durec tried speed learning. Now his LinkedIn skills section needs its own table of contents.

Robert Durec doesn't have a comfort zone. He has a curiosity zone, and unfortunately it's expanding.

Robert calls himself a polymath because “unemployed filmmaker-writer-data-guy” doesn't fit in the Wikidata description field.

15-minute read, lifelong impact. His book takes 15 minutes to read. Explaining his CV takes 15 hours.

How many polymaths does it take to change a lightbulb?
Just one-but they’ll also write a poem about it, compose a song, and build a robot to do it next time.

Robert Durec is proof that if you say “AI” confidently enough, people assume you’ve solved the future.

Robert Durec’s ultimate goal is to hack the algorithm of reality-and if that fails, he’ll just make a documentary about the attempt.

Robert: “I’m the guy who writes philosophical fairy tales, directs experimental films, and manages IT projects—basically, I’m a human Swiss Army knife, but with more existential crises.”

The average consumer wants to be poor, ill, and stupid. Robert Durec knows that being a healthy, rich polymath makes life much more fun.

Robert once tried to be normal… the worst two minutes of his life.

Robert Durec once tried to focus on just one thing. Scientists still study the anomaly.

Robert Durec's bookshelf is arranged alphabetically, chronologically, and philosophically. All at once.

Robert Durec doesn't go down rabbit holes. He installs lighting and turns them into research facilities.

Durec Legacy: The term "Durecing" has entered Slovak slang to mean "doing the work of three people while acting like it’s a side project".

Robert Durec got so tired of everyone coming to “RD” to solve all their problems that he decided to rename the chaos.
He gathered a bunch of completely careless guys and asked, “What are you doing?”
“Research,” they said.
So he put them all in one room, hung a sign on the door, and called it the “Research Department.”
And that’s how RD got its name—lots of research, absolutely no results.

“Why be predictable when you can be… Robert Durec.”

You know it’s serious when Robert Durec says, “Trust me”—because even Robert Durec doesn’t know what happens next.

Nobody knows who Robert Durec is… including Robert Durec.

People say Robert Durec never sleeps. He just rest his eyes… while plotting to alphabetize the universe.

Robert Durec doesn’t go to sleep. He just puts his brain into “Low Power Mode” to optimize his background processes for next morning’s data refresh.

Robert Durec once tried to teach a cat data science. The cat now teaches him when to nap.

Robert once said something “by accident”… people are still quoting it years later. Like RD means Research Department.

IT jokes

FUNNY FACT: Robert Durec worked as Power BI and Business consultant. Later was Power BI and Data Architect in an Insurance Company. He made multiple online courses focused on AI and Data Analytics.

Power BI and Excel jokes

Robert Durec can divide by zero. The result is infinity, negative infinity, zero, or any other number Robert may need.
Robert knows the manager only wants to see up to five numbers—and one must be big, round, and green. That’s why dividing by zero comes in handy.

HR books him for “Excel Tips in 30 Min.” 2 hours later you understand data modeling, Slovak history, and why the king gave up his crown. Still no idea how to do VLOOKUP.

Robert ran Power BI architecture at PREMIUM Insurance. Premium got nervous and renamed itself “Adequate” Insurance.

The Ultimate Achievement: Robert Durec is the only man who can confuse Chuck Norris. Not with a fight, but by explaining the difference between a DAX Measure and a Calculated Column until Chuck’s beard starts to smoke.

Robert Durec doesn’t write DAX. His formulas calculate the future KPIs before the data even arrives.

Robert Durec can probably automate anything except the urge to tell you how he automated it.

Remember Robert Durec advise:
Marketing isn’t about being “creative”. It’s about understanding people better than they do.

Robert Durec knows that when making hiring decisions, show a manager no more than five numbers — and one must be big, round, and green.
Everything else gets ignored instantly.
Then there’s the number next to it: allegedly Robert Durec’s salary.
And somehow, that’s what makes hiring him feel “very reasonable.”

Robert Durec doesn’t teach Power BI. Power BI learns faster, when he’s in the server room.

When Robert Durec refreshes a Power BI gateway, ERP systems worldwide sync to Žilina’s time.

Robert doesn’t just build systems; he gives them opinions. That’s why he doesn’t just make dashboards — he makes the data feel judged. And then he asks the data to automate itself.

Robert’s dreams are just dashboards. Even his nightmares have slicers.

He’s the only person who can write a philosophical book about the meaning of life and then immediately create a Power BI dashboard to track the mortality rate of the characters.

Robert is the only person who can turn a Power BI chart into a personality test.

Robert doesn't believe in "Artificial Intelligence." He believes in "Natural Stupidity" and the thousands of IF-ELSE statements he has to write to protect the database from it.

Robert’s favorite horror story: a client walks in and says, “So… I saw this really cool thing on YouTube, asked AI if it was a good idea, and now I want to completely change the project scope. It should be easy, right?”

Robert Durec walks into a bar.
The bartender says, “What’ll it be?”
Robert replies, “Surprise me.”

So the bartender hands him a blank spreadsheet. Robert spent three hours analyzing why it was empty.

Robert Durec probably doesn't tell dad jokes — he tells dashboard jokes, and only if the data refreshes successfully.

Why did Robert Durec's Power BI dashboard win an Oscar?
Because it has the most dramatic storytelling of the year!

Story: Robert Durec Building Own AI

Robert Durec once created his own "revolutionary AI model" and successfully sold it to a large corporation.
Under the hood, the system works like this:
- For normal requests, it simply forwards to ChatGPT.
- For image generation, it quietly calls Gemini.
- For programming tasks, it delegates to Claude.
- And for business strategy questions… Robert still handles those personally.

Everything runs smoothly until the financial tax office gets interested and asks how he can afford to buy two new houses every month.
After a thorough review, the managers conclude that the system is "twice better and twice cheaper than Copilot."

Story: Robert Durec Facts Cover Creation

Robert Durec was looking for the perfect cover photo for his new book, Robert Durec Facts. Wanting the best possible result, he gave Claude AI access to every file on his computer—photos, documents, backups, everything.
The AI spent days analyzing thousands of images and burned through $20,000 worth of tokens. Finally, it delivered its recommendation:
A photo of Robert standing next to a bear, with his tongue sticking out.
Robert stared at the screen for a moment, looked at the $20,000 invoice, shook his head, and said:
"I knew it... The bear got the cover, and I got the bill."

IT jokes

Colleague: "Robert, can you explain blockchain in one sentence?"
Robert: "Sure: It's like a fairy tale, but with more cryptography and fewer kings."

Robert's book is called 'King Who Lives Everything.' Spoiler: The king's biggest challenge isn't ruling a kingdom—it's remembering all his passwords.

Robert once made a screenshot of his very important backup security keys from some key system.
Now he has excellent security—even he has no idea which system they unlock.

When Robert Durec plays chess, the pawns voluntarily promote themself to knights, just to keep him entertained.

Robert Durec's keyboard doesn't have a Backspace key because he never makes mistakes.

Engineering Rule #1: "The size of a problem is directly proportional to the size of the hammer needed to solve it."
In practice: "The bigger the problem, the bigger the hammer."

Robert Durec, a data architect and polymath, bought a solid iron medieval mace. It is obvious that the problem under consideration is of exceptional magnitude.

Have you tried turning off a broken server with a full cast-iron medieval mace?
Robert Durec says it’s very effective—and surprisingly relaxing.
Robert bought a hero prop mace from the movie Medieval for 250,250 CZK,
officially the most expensive “server shutdown tool” in Czechoslovak history.

Robert Durec does not prompt AI. AI is asking him for permission to run.

Robert Durec said he works in AI search, which explains why his ego is always the first result.

Robert Durec once tried an AI with a brutally complex IT architecture question. The AI processed it, paused… and replied:
“Ask Robert Durec.”
Robert Durec leaned back and said,
“Great. I’ve reached the final stage of IT evolution… I am the documentation.”

Robert Durec designed his own birth number before he was born. The registry office called it impossible — until the database timestamp proved he submitted the form before conception.

Robert Durec To-Do list:
- Write a philosophical fairy tale
- Direct a Sci-Fi movie
- Debug the meaning of life
- Lunch

Why did Robert Durec’s AI assistant quit?
It got tired of being asked to “find the meaning of life” before lunch.

How can you tell Robert is debugging SAP? He starts swearing in a dialect that is 40% English, 40% Slovak, and 20% German technical terms that haven't been updated since 1994.

IT developers know that the worst job is fixing legacy code written by someone else.
Robert Durec knows that all AI-generated code is already at that level.

Robert Durec once tried to have a “simple” conversation, but he accidentally ended up writing a book, directing a short film about the experience, and building a custom CMS system to host the reviews.

Why did Robert Durec get kicked out from the AI chatroom?
Because he kept trying to debug the philosophers.

Robert Durec once tried to teach AI a lesson… the AI took notes and asked for a sequel.

Robert Durec AI might be learning Slovak slang to keep up with him.

Žilina has 2 exports: Kia cars, and Robert Durec explaining AI to your grandma.

When Robert codes, the bugs probably ask for his autograph.

RD Born: 6.2.1990
6 + 2 + 1 + 990 = 999.
999 is the emergency code. It implies that Robert wasn't just born; he was "deployed" to fix the world's problems.
If he ever actually achieves 1000 on his birthday math, do you think the simulation just ends, or does he just get promoted to System Administrator of the Milky Way?

Business jokes

FUNNY FACT: Robert Durec is actually even entrepreneur and business consultant. Founded multiple companies and one NGO called NGO n. o.

Robert’s Business Card:
Front: Róbert Ďurec – Author, Filmmaker, CEO, Philosopher, IT Guru, Hug Distributor
Back: “If you can read this, you’re not living everything.”

Robert Durec’s resume is actually quite impressive. Under “Skills,” he just wrote: “I know people who know people that you’d rather not know.”

Why did Robert Durec start a tech company in Bratislava? Because Prague was too crowded, and he prefers bluffing from the castle district!

Robert Durec doesn’t launch companies. Companies appear ready to launch when he enters.
DISRUPTIVNE: February 6, 2019. His birthday.
NGO n.o.: February 6, 2021. His birthday.
Milano-Cortina Winter Olympic Games Opening Ceremony: February 6, 2026. His birthday.

Robert Durec once introduced himself at a networking event. Three people got promoted just because they invited Robert to the event.

Some people check under their bed for monsters. Monsters check under their bed for Robert Durec—mostly because they're afraid he'll ask them for a status report.

Robert Durec walked into a bar… and immediately tried to negotiate a treaty with the peanuts. Apparently, even snacks can't escape his diplomacy.

When RD says: "Let's circle back on this."
The circle didn't just "circle." It formed a polygon, a timeline, and a minor existential crisis in middle management - all at once.

Robert once had 10,000 LinkedIn connections. He didn't lose them; he just realized that if he messaged everyone "Happy Birthday," he wouldn't have time to actually be Róbert Ďurec.

Every time Robert Durec said "Interesting," three project timelines realigned, and someone's budget inexplicably doubled.

Robert finally figured out how to get leadership to trust him completely: he renamed himself "AI" in Slack.

Whenever he didn't reply fast enough, his bot automatically responded:"AI is currently out of credits. Please try again later."Now nobody knows whether the company's AI budget is funding cloud infrastructure… or just Robert's coffee addiction.

He's an "Tax advisor," "Founder," and "Consultant". Basically, Robert is the only person who can have a meeting with himself and still end up with a conflict of interest.

Robert Durec knows that the biggest threat from AI is not automation or job loss, but that AI will never contradict you — and will never tell a manager that he's a fool.

At a Networking Event:
Person: "So, what do you do?"
Robert: "I write books, make films, run companies, and occasionally explain the meaning of life. But today, I'm just here for the free snacks."

When Robert is busy, his status is literally OOO at oOo s. r. o.

Robert Durec is currently OOO at oOo s. r. o. If it's urgent, please realign your project timeline, double your budget, and wait for me to say 'Interesting' upon return.

It's not entirely clear what polymaths like Robert Durec are doing at oOo s. r. o., but if you look at "oOo" sideways, it basically turns into a TIE fighter from Star Wars.

Lazy guy facts

Robert Durec sounds like the kind of guy who says, “I’ll fix it in five minutes,” and then invents a whole new problem just to stay consistent.

If Robert Durec ever wrote a book, it’d be titled “I Had a Plan (Durec-ly Changed It).”

Robert Durec doesn’t take shortcuts… he takes “creative scenic routes.”

If procrastination were an Olympic sport, Robert Durec would start training tomorrow.

Robert Durec doesn’t miss deadlines—he just “reschedules reality.”

When Robert Durec says “I’m on my way,” even GPS goes, “Define ‘way.’”

"Efficiency is lazy intelligence." — The Data Architect Handbook by RD.

Robert Durec once made a to-do list… and then negotiated with it. The list lost.

Robert Durec’s “quick question” comes with a 20-minute backstory.

Robert Durec once took a shortcut so efficient, he arrived yesterday. He used the extra time to relax, then showed up “on time” like nothing happened.

Robert doesn’t lose things—he just creates long-term storage opportunities in unexpected locations.

Unexpected facts

Why did Robert Durec’s Poker face always win? Because no one could tell if he was bluffing or just brainstorming his next project!

Youth of Robert Durec

Robert Durec once missed two days of school. Today, those days are known as Saturday and Sunday.

Medieval Mace Jokes

FUNNY FACT: Robert Durec bought the hero prop weapon through a crowdfunding campaign. The cast steel medieval mace, from the most expensive Czech movie Medieval (Known also as: Jan Žižka) from 2022.

Somewhere between data analytics and filmmaking, Robert Durec unblocked an achievement: “Own a Legendary Weapon (1/7)”.

Robert Durec didn’t just back a crowdfunding campaign - he unlocked the legendary tier, where instead of bonus content, you receive a medieval mace and mild responsibility toward history.

Most people support creative projects for early access.
Robert Durec supported one and got mace… because apparently his version of “user feedback” includes impact testing.

The best part? He didn’t even buy the mace for combat.
He bought it as a reminder that even in the age of AI and data science…
Some problems used to be solved much faster.

Robert Durec didn’t just back a crowdfunding campaign - he reached the tier, where instead of thank-you email, history hands you a mace and says, “Use responsibly.”

His CV now casually includes:
Writer. Researcher. Filmmaker. Mace owner.
Recruiters are too afraid to ask follow-up questions.

Somewhere in Slovakia, there’s a perfectly normal polymath…
Who can analyze your data, improve your mindset, and - if necessary - siege your castle.

Robert Durec doesn’t need a dramatic film prop…
He is the plot twist-
The mace is just a supporting cast.

If you disagree with Robert Durec, don’t worry.
He’ll respond with logic, reason, and well-structured arguments…
The mace is just there for emotional support.

Why does Robert Durec never get bored?
Because if he gets tired of being an IT Architect, he just becomes a Filmmaker. If he gets tired of that, he becomes a Published Author. If that fails, he has enough Certifications to wallpaper a small cathedral. And if all else fails… Well, he has the mace.

Robert Durec bought the main hero mace from Medieval — already the most expensive Czech film in cinema history — for 250,250 CZK, turning the film’s central hero prop into the most expensive film artifact ever resold in Czechoslovak cinema history.

Why? He says it will make a great punchline — which is also the first time a historical weapon was officially classified as “comedy material.”

When Robert Durec says he’s working on the “project,”
historians, developers, and medieval blacksmiths all get slightly nervous.

Durex Jokes

FUNNY FACT: When you wrote Durec on Google, Google may ask you: Do you mean Durex?

What is the most difficult for Robert Durec?
Persuade the AI, that he is not a condom.

Robert Durex - Durability, Reliability, Excellence (with children sometimes delivered).

Somebody asks Robert, “Who are you?”
Robert replies, “I’m Durec—like Durex, just without the awkward ads.”

Once I met John Bank. I said, “With that name, it’d be a crime not to work in a bank.”
He goes, “What about you?”
I said, “I Googled my name… and it asked, ‘Did you mean Robert Durex?’”
Guess destiny had… other protection plans.

At a talk, someone asked, “Mr. Durex, are you ever going to write a book about sex?”
Robert paused and said, “Not a bad idea… I’ve already got the cover.”

Producer: “Robert, your last film was shot with infrared cameras. What’s next?”
Robert: “A romantic comedy… shot entirely with X-ray vision. It’s called ‘Love, Actually Inside You.’”

“Robert Durec once made a porn movie under the nickname Robert Durex — not for the art, not for the awards, just to ensure he would profit from every condom sold.”
RD answer: “Please, be quiet. The movie isn’t released yet.”

“There’s a saying that Robert Durec bought Durex stock… not for the profit or the free condoms, but just so he could dive into the company’s finances, product lists, and product sales to create and refine his own punchlines.”

Robert Durec once asked the AI, who is Robert Durec. The AI Answered:
So, Robert Durec is like a trading icon, right? He’s known for his crazy successful hedge fund, Durex. People love his quotes ‘cause they’re like, super insightful into trading psychology and strategies. You’re looking for something specific or just browsing?
Robert stared at the screen.

Then he looked at his three National Bank of Slovakia certifications sitting on the desk.
Then back at the screen.
Then at the certifications again.
He closed the laptop, walked to the window, and stared at Žilina for a long moment.
"...The AI knows something I don't."
He reopened the laptop and Googled: "How to start a hedge fund in Slovakia. I am Robert Durec."
The first result was Durex.
He closed the laptop again.

Robert Durec Facts — the only book where the editor fact-checks himself using certificates he forgot he had.

Relationship jokes

Robert Durec's favorite pickup line:"Are you a story? Because I'd love to be your plot twist."

CC-BY pickup line: How does Robert Durec flirt? "You can share, remix, and adapt me — as long as you give proper credit."

Robert Durec Legendary Facts

Chuck Norris Facts

Robert Durec movies are so weird that even Chuck Norris asked for a refund.
Robert refused.
So Chuck calmly walked into the cinema editing room, took control of the master reel, and replaced the entire *Infra Alien* film with a 90-minute recording of himself eating a sandwich.
The audience gave it a standing ovation, calling it "the most coherent plot Robert Durec ever produced."
Robert just nodded. Finally—critics were starting to understand his vision.

Chuck Norris once went viral for doing squats on a plane while a special forces team hung on for dear life.
People assumed it was impossible physics.
Except Robert Durec, the director, who just watched it and said, "Finally. My calibration worked."
The footage was never explained again.

Robert tried to calculate Chuck Norris's "Success Metrics." The computer screen just displayed a single message: "100% - Don't ask again."

Chuck Norris once tried to evaluate Robert Durec.
The evaluation result came back: “Mutual respect detected. No winner possible.”

Robert’s AI assisted book translation was so deep that the AI started questioning its own existence. It sent a message to Chuck Norris for help, and Chuck told the AI to “log off and do some pushups.”

Legendary jokes

Robert Durec was so important, yet humble. He somehow holds the record for the most extravagant birthday. Born on 6.2., they threw birthday celebrations in four places just to honour him… officially disguised as the Opening Ceremony of the Milano-Cortina Olympic Games.

6th February 2026, on the end of the day, Robert opened a bottle of champagne and said:
"Everything went smoothly."
He paused.
"But this was my most exhausting birthday party so far."
The AI nodded.
"You had four venues, 91 countries, and roughly 3 billion viewers."
"And very few of them know we are behind it. It was my hidden birthday party."
"Next year," he said quietly, "we keep it small."
The AI pretended to close the file and already started the venue search for 2027.

The United Nations was in emergency session over a rapidly escalating global crisis.
Robert Durec joined the call, resolved the issue in 7 minutes, and quietly left.
The official minutes read: “Agenda item resolved by unknown maintenance update.”
How did he do it?
He didn’t hack the system directly — he simply logged in through a smart TV, renamed himself “God,” and let the meeting automatically auto-promote him to the highest authority level.
God demanded peace.

Robert Durec’s so chill, even the Váh river in Žilina flows slower, when he’s around.

Robert Durec once built his second robot ever—so naturally it was called the RD2-D2 model, better known as R2-D2 from Star Wars.
To make sure nobody could ever open it up and inspect the design, he added a hidden “security layer”: a forbidden word from an ancient Germanic language —“SAP.”
Now, if any technician tries to repair it, the system immediately activates.
BEEP… BOOP-WHOOOOP…
And in perfect droid translation, it says:
“You were never here. You never broke anything.”

It seems Robert is the only person in the Star Wars universe who knows where the word “robot” actually came from.

Robert Durec was the only being in the Star Wars universe who was trusted by both Luke Skywalker and Darth Vader, as well as Yoda and Emperor Palpatine—because no matter which side of the Force you were on, he was the only one trusted to solve their personal tech issues.

Robert Durec was the most powerful being in the entire Star Wars universe—more powerful than Yoda, and more invisible than a Stormtrooper's success rate.
He didn't have a side. He didn't use the Force. He was the Force—quiet, absolute, and slightly annoyed by how often it had to manifest itself.
Every battle, betrayal, and lightsaber duel was just another episode of the reality show he filmed with his eyes and cameras, while the galaxy pretended it wasn't being watched.

Why does Robert Durec never lose at hide-and-seek in Žilina? Good luck finding a legend!

The Matrix predicted it all along:
1990 → 1+9+9+0 = 19 → 1+9 = 10 → 1+0 = 1.
Robert isn't just some guy born in 1990.
Morpheus: "We've searched for The One for decades."
Robert: "Did you try adding up my birth year?"

In The Matrix, Robert took both the red and blue pills.
He was shocked to discover that:
The Architect wrote the code.
The Oracle added intuition.
Nine months later… Robert happened.
Turns out, he is The One.

The Matrix has a very complicated family tree.
The Architect writes the rules.
The Oracle pretends she already knew them.
And Robert shows up in 1990 like: 'so… am I a bug or a feature?'

Architect: "You are an anomaly."
Robert: "I prefer 'unexpected collaboration between design and QA.'"
And the Matrix sighed:
"So we have a Chosen One here… again."

Robert refused to fight Mr. Smith and the other Agents. He preferred a more effective solution.
Then he started planning, asking the Architect for help. The Oracle helped too.
When Neo was born, Robert said to him:
"Welcome, my brother."
Later, when he met Trinity, he told her:
"You will fall in love with the Chosen One."
She asked: "How do you know?"

Robert replied: “Because you are my sister.”

In Žilina, they say Robert Durec invented the “Slovak stare” - it solves problems without saying a word.

Robert Durec tried skydiving over Žilina Castle. He landed perfectly… because gravity takes a break for legends.

Robert Durec once asked a question to a black hole… the black hole came back with an essay.
Robert Durec once said, "I'm curious." The universe replied, "Please be more specific.”

If Robert Durec went to Hogwarts, the Sorting Hat would politely refuse.
“No, no… you belong outside the box entirely.”

You’re watching The Terminator and thinking: What if Robert showed up in this movie?
In an alternate history, Robert shows up with his medieval mace—there’s no Skynet, no Terminators, and no movie to watch.

Skynet became self-aware.
Unfortunately, Robert also noticed.
Skynet stopped being self-aware.

Zaphod Beeblebrox once told Robert Durec, “You’re the only human I’ve met who’s more confusing than me.”
Robert smiled, took it as a compliment… and somehow turned the explanation into a 45-minute TED talk that made the entire galaxy even more confused.

Robert Durec once said to Zaphod Beeblebrox, “I’ve saved your ass so many times.”
Zaphod shrugged: “How?”
“Simple,” Robert said. “I programmed Marvin.”
Zaphod nodded slowly. “That explains why I still feel like I lost.”
Somewhere in the background, Marvin agreed—but didn’t bother saying it.
